[www.fciworldwide.com](http://www.fciworldwide.com)

FCI S.A.S. is a world leader in the development of a wide range of ophthalmic surgical devices.

Since the company's inception in 1984, the innovative developments of FCI have helped physicians to solve problems related to epiphora, dry eye, eyelids, and orbital surgery, thanks to a wide range of innovative ophthalmic devices such as self-retaining intubation sets, lacrimal balloon catheter, injectable monocular intubation, permanent punctal plugs, eyelids and orbital implants.

FCI performs extensive research and development to provide physicians with outstanding products that enhance the efficiency and effectiveness of surgical procedures.

**This line of product is FCI latest commitment to provide you high performance products in oculoplastic surgery.**

## POLYVINYLPYRROLIDONE (PVP)

PVP is an exclusive surface treatment applied to FCI lacrimal products to improve the hydrophilic properties of silicone.

The benefit of such a treatment is to enhance the efficiency of tear drainage and to limit the accumulation of debris at the surface of our silicone intubations and perforated plugs.

## PUNCTAL STENOSIS

FCI PVP perforated plugs are used to treat excessive tearing due to partial occlusion of punctum and punctal stenosis. They act as a conformer by keeping the punctal opening dilated for several weeks, allowing tears to be drained through.

### PVP Perforated Plugs

Designed by J.-A. Bernard, M.D.

- PVP coated medical grade silicone
- Slanted collarette for a perfect anatomical fit against the eyelid margin
- Exclusive polishing for a perfectly smooth surface
- 2 models available: standard & mini
- Preloaded on a disposable plug inserter to facilitate the insertion
- Sterile

## DACRYOCYSTOPLASTY

### Ophtacath®

Ophtacath® is a lacrimal duct balloon catheter kit indicated for the dilation of an obstructed nasolacrimal duct.

It consists of a semi-flexible stainless stylet covered by a tubing and finished by a Nylon Polyn® balloon.

The balloon catheter works with a disposable inflation system to dilate the obstructed nasolacrimal duct, which is a most efficient solution to treat rapidly and durably the symptoms of epiphora.

- Proven results
- Fast and efficient procedure
- Easy to insert & to remove
- Exclusive tapered tip
- Exclusive balloon design retains folding memory
- Exceptional resistance to burst pressure
- Highly precise inflation system
- Available in 2 diameters: 2 mm (infants) & 3 mm (adults)
- Unilateral or bilateral versions
- Includes disposable inflation device
- Sterile

## INTUBATION SETS

### MONOCANALICULAR INTUBATION

#### Mini-Monoka®

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- Indicated for monocalicular lacerations
- Gold standard for canalicular repair
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- Medical grade silicone – PVP option
- Sterile

## MONOCANALICULAR NASOLACRIMAL INTUBATIONS

### LacriJet®

LacriJet® is FCI latest and exclusive preloaded & self-retaining monocanalicular nasolacrimal intubation indicated for epiphora, congenital nasolacrimal duct obstruction and canalicular laceration.

It consists of a single use injector handpiece into which a silicone tube is preloaded inside a metallic guide. LacriJet® has been specifically designed to reduce operating time, either in the intubation phase as well as for the removal of the device.

LacriJet® is first introduced into the nasolacrimal duct.

Once in position, the sliding piston is retracted and the silicone intubation is released.

It is maintained in place at the punctum by a plug-like fixation head: no nasalretrieval, no knot and no sutures are needed.

The smaller sizes LacriJet® 15 mm and 20 mm have been specifically designed for canalicular laceration repair to prevent future canalicular obstruction due to scar tissue formation.

- Exclusive new injection system
- Silicone tube preloaded inside the metallic guide
- No nasal retrieval
- No knots
- No sutures
- Available in 7 lengths
- 3 mm plug collarete
- Requires sizer (S1.1288) to select the length & 0.3 mm disposable punctum dilator and plug inserter (S1.3090)
- Sterile, Single use

## INTUBATION SETS

# MONOCANALICULAR NASOLACRIMAL INTUBATIONS

### Masterka®

Masterka® is one of FCI latest innovation for treatment of congenital nasolacrimal duct obstruction resistant to probing.

Unlike the traditional “pulled” technique in which the stent is advanced through the nasolacrimal system and retrieved through the nose by pulling on the guide probe or thread, the Masterka® has no metallic probe or suture attached to it and, therefore, it is not pulled out of the nose.

Instead, the Masterka® is pushed into the nasolacrimal duct and anchored in place at the punctum by a plug-like fixation head.

- Easy to insert
- No nasal retrieval
- No knots
- No sutures
- Less traumatic
- Requires sizer (S1.1289) to select the length & 0.3 mm disposable punctum dilator and plug inserter (S1.3090)
- Available in 3 lengths: 30, 35 and 40 mm
- 3 mm plug collarette
- Medical grade silicone
- Sterile

		DIAMETER	LENGTH	PACKAGING
S1.1608	Masterka®	0.90 mm	30 mm	Box of 1
S1.1609	Masterka®	0.90 mm	35 mm	Box of 1
S1.1610	Masterka®	0.90 mm	40 mm	Box of 1

# EPIPHORA

FCI Monoka® intubation systems have been designed to effectively treat nasolacrimal duct obstructions and canalicular stenosis. The stents are securely anchored at the punctum by a plug-like fixation head.

## Self-threading Monoka® (Ritleng® type)

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- Reduced trauma and procedure time
- 3 mm medium or 4 mm wide plug collarette
- PEEK (PolyEtherEtherKetone) black thread
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with Ritleng® set of instruments (S1.1460, S1.1470, S1.1480)
- Medical grade silicone – PVP option
- Sterile

## Monoka® of Fayet (Crawford Guide)

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- 3 mm medium or 4 mm wide plug collarette
- Stainless steel probe with non-traumatic rounded olive tip
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with the Crawford hook (S1.1275) for endonasal retrieval of the probe
- Medical grade silicone

## BICANALICULAR INTUBATIONS

### Autostable Bicanaliculus Intubation Set II

The Autostable Bicanaliculus Intubation Set II is indicated to treat punctal stenosis and horizontal lacrimal duct obstruction.

Thanks to the rigid guides inside the silicone tube, the placement of the Autostable Bicanaliculus Intubation Set II is straightforward, and can be done as an office procedure.

- Silicone wings at each end ensure the stability in the lacrimal sac
- Central mark to control tube placement
- Supplied with disposable dilator
- Available in 3 lengths: 25, 30 and 35 mm
- Requires sizer (S1.1289) to select the appropriate length
- Medical grade silicone
- Sterile

		LENGTH	DIAMETER	TUBE MATERIAL	PACKAGING

## INTUBATION SETS

### BICANALICULAR NASOLACRIMAL INTUBATIONS

#### FCI Nunchaku®

FCI Nunchaku® is a pushed silicone self-retaining bicanalicular nasolacrimal intubation stent that acts like a conformer, allowing tears to be drained by capillarity.

The metallic guides are located inside the lumen, not as an extension of the stent as in conventional intubation sets. Therefore, no nasal retrieval is needed.

The stability is guaranteed by the design of the silicone tubes: no need to make knots and sutures in the nasal fossa.

- Indicated for canalicular pathologies, congenital lacrimal duct obstruction & dacryocystorhinostomy (DCR)
- No nasal retrieval
- No knot or suture needed
- Available in 2 lengths: 90 mm and 105 mm
- Medical grade silicone
- Sterile

		LENGTH	TUBE		PACKAGING

# EPIPHORA

Ritleng<sup>®</sup> intubation system consists of a silicone (or PVP coated silicone) tube connected at each extremity to a Poly Ether Ether Ketone (PEEK) thread guide to reduce time and trauma in lacrimal duct intubation surgery.

The procedure involves inserting the hollow Ritleng<sup>®</sup> Probe into the nasolacrimal duct and feeding the thin PEEK thread through it.

The probe is then withdrawn, leaving the PEEK to pull the silicone tubing into place.

## BICANALICULAR NASOLACRIMAL INTUBATIONS

### Ritleng<sup>®</sup>+ Autostable Ritleng<sup>®</sup> Intubation

Ritleng<sup>®</sup>+ is FCI latest autostable bicanalicular nasolacrimal intubation indicated for epiphora, canalicular pathologies, congenital lacrimal duct obstruction and dacryocystorhinostomy (DCR).

It consists of a silicone tube connected at each extremity to a PEEK thread guide. It is designed **to reduce operating time and trauma for the patients, either in the intubation phase as well as for the removal of the device.**

**The intubation is self-retaining** thanks to two wider silicone portions on the silicone tube. The surgical procedure is similar to the conventional Ritleng<sup>®</sup> lacrimal intubation and involves the use of Ritleng<sup>®</sup> instruments.

- Regular 0.64mm silicone tube for a comfortable fit in the intrapalpebral loop
- Wider 0.94mm silicone segments to be positioned in the lacrimal sac ensuring the self-retaining feature of the intubation: no need to make knots in the nasal fossa
- Black mark to control the central placement and correct positioning of the silicone tube between the two punctums
- Easy removal from the nose
- Require Ritleng<sup>®</sup> instruments (S1.1460, S1.1470, S1.1480)

### BICANALICULAR NASOLACRIMAL INTUBATIONS

FCI BIKA® intubation systems have been the first models designed for bicanalicular intubation, especially in case of congenital nasolacrimal duct obstruction and dacryocystorhinostomy (DCR).

The metallic probes are securely connected at the silicone tube for an easy and safe retrieval from the nose.

Designed by J.-A. Bernard, M.D.

- FCI exclusive design
- Strong connection between silicone tube and metallic probe
- Non-traumatic rounded tip
- Many different designs available

## STOPLOSS™ JONES TUBE

The new StopLoss™ Jones tube system puts an end to the high loss rate of ordinary Jones tubes yet is safe, effective and easy to use.

With a unique, patented tube design leading to exceptional levels of tube stability, and a new introducer system ensuring simple, accurate tube placement every time, the new StopLoss™ Jones tube system is designed for stability, simplicity and outstanding patient and surgeon satisfaction.

- Exceptional stability
- Easy to use
- Excellent tear drainage
- Wide range of tube sizes
- Use StopLoss™ Jones tube introducer set (S1.7500) to choose the appropriate diameter and length of tube and StopLoss™ Jones tube removal tool (S1.7600) to ensure a simple and non-traumatic removal of tube.

## PRELOADED PUNCTAL PLUGS®

FCI punctal plugs are preloaded on a disposable inserter for a progressive release & an easy insertion.

Designed by J.-A. Bernard, M.D.

- Original design
- Ergonomic slanted collarette
- Preloaded on disposable inserter
- Good tolerance & optimal patient comfort
- Available in 5 sizes
- Medical grade silicone
- Sterile

		SIZE	MATERIAL	PACKAGING

## PTOSE-UP®

FCI Ptose-up® is a strip of biomaterial made of expanded Poly Tetra Fluoro Ethylene (ePTFE) used to join the upper eyelid to the frontalis muscle in ptosis surgery with frontalis suspension.

- FCI exclusivity
- Used successfully for more than 30 years
- Ready-to-use
- Biocompatible
- Biointegrable (70µm pores)
- Excellent tolerance
- No need for autologous tissue
- **New feature: Needles with ultra sharp tips attached to the Ptose-up® to facilitate the strip insertion**
- Strip: 150 mm long & 0.35 mm thick
- Two widths available : 2mm & 3mm
- Needles: 58 mm long
- Sterile

		WIDTH	MATERIAL	PACKAGING
S3.3001	Ptose-up®	3 mm	ePTFE	Box of 1
S3.3021	Ptose-up®	2 mm	ePTFE	Box of 1

**FCI EXCLUSIVE**

Designed by J.-M. Ruban, M.D.

## PTOSIS PROBE

FCI Ptois suspension set is indicated for ptosis surgery with frontalis suspension.

- Improved needles with ultra sharp tips
- Silicone tubing
- **New feature: Silicone fixation sleeve for better tension / traction control**
- Perfect connection between silicone tubing & needles
- No need for autologous tissue
- To position the fixation sleeve, we recommend to use the Watzke forceps (S5.3100)
- Needles: 58 mm long
- Sterile

# EYELIDS

## EYELID WEIGHTS

FCI eyelid weights are indicated for the treatment of the functional defects of lagophthalmos resulting from facial paralysis.

## THINPROFILE™ EYELID IMPLANTS

ThinProfile™ eyelid implants feature a sleek surface, anatomically friendly curvature with tapered edges and smoothly rounded corners.

- Available in platinum or gold
- Superior eyelid cosmesis
- Weight range from 0.6 g to 1.8 g
- 0.6 mm thickness / 5 mm width
- Enhanced patient satisfaction
- Sterile

### Platinum eyelid implant

- Smallest implant available: 11% higher density than gold
- Excellent biocompatibility
- Proven for gold-sensitive patients

ThinProfile™ - Platinum	WEIGHT	PACKAGING
S3.6006	0.6 g	Box of 1
S3.6008	0.8 g	Box of 1
S3.6010	1.0 g	Box of 1
S3.6012	1.2 g	Box of 1
S3.6014	1.4 g	Box of 1
S3.6016	1.6 g	Box of 1
S3.6018	1.8 g	Box of 1

### Gold eyelid implant

- 99.99% pure gold
- Excellent functional results

ThinProfile™ - Gold	WEIGHT	PACKAGING
S3.4006	0.6 g	Box of 1
S3.4008	0.8 g	Box of 1
S3.4010	1.0 g	Box of 1
S3.4012	1.2 g	Box of 1
S3.4014	1.4 g	Box of 1
S3.4016	1.6 g	Box of 1

## EYELID WEIGHTS

### CONTOUR™ EYELID IMPLANTS

Contour™ eyelid implants feature the original proven characteristics and design of FCI eyelid weights.

- 99.99% pure gold
- 1 mm thickness / 5 mm width
- Weight range from 0.6 g to 1.8 g
- Sterile

	Contour™ - Gold	WEIGHT	PACKAGING
S3.3006		0.6 g	Box of 1
S3.3008		0.8 g	Box of 1
S3.3010		1.0 g	Box of 1
S3.3012		1.2 g	Box of 1

S3.3016		1.6 g	Box of 1
S3.3018		1.8 g	Box of 1

### EYELID WEIGHT SIZING SET

This set enables the ophthalmologist to select the appropriate eyelid weight.

The eyelid should close without difficulty and induce a slight ptosis of no more than 1.0 mm.

This set includes:

- A storage case
- 7 sizing weights from 0.6 g to 1.8 g
- 100 double-sided hypoallergenic adhesive strips
- For external use only
- A skin tone selector card to determine the eyelid weight that best approximates the patient's skin complexion

# EYELIDS

## EXTERNAL EYELID WEIGHTS

FCI external eyelid weights provide those with lagophthalmos as a result of temporary facial paralysis or Bell's palsy with an immediate and easy to apply treatment.

- Easy-to-use
- Effective non-surgical eyelid closure treatment
- Available in 4 skin tones
- Weight range from 0.6 g to 1.8 g
- Supplied with 100 double-sided hypoallergenic adhesive strips
- Non-implantable, Non sterile

## ORBITAL IMPLANT

### BIOCERAMIC ORBITAL IMPLANT

FCI Bioceramic orbital implants have become the new standard in orbital implant material.

These implants have an improved vascularization structure over other existing alternatives, allowing for quick fibrovascularization.

This bioceramic material is a biocompatible, bioinert, nontoxic, and non-allergenic substance. These implants are well-known by surgeons as a stable and easily handled implant for use in enucleation and evisceration procedures.

- Indicated for enucleation, evisceration and secondary implantation
- Made of 99% pure alumina (Al<sub>2</sub>O<sub>3</sub>)
- Material used in orthopaedic and dental fields with success for more than 30 years
- Porosity range: 200-550 μm
- Uniform interconnected pores, 85% of the total volume between 200 and 300 μm
- Strong and non-brittle material
- Rapid & complete fibrovascularisation
- Lightweight
- Easy to insert: less sticky & no velcro effect
- Low tissue reaction & low exposure rate
- Regular surface: less irritation & less inflammation
- 2 alternatives: sphere or egg shaped
- Sterile

## HYDROXYAPATITE (HA) ORBITAL IMPLANT

FCI synthetic hydroxyapatite implants offer a cost effective and environmentally conservative alternative to natural hydroxyapatite.

- Indicated for enucleation and evisceration
- Made of totally synthetic hydroxyapatite
- Porosity range: 300 – 500µm
- Sterile

## ACCESSORIES

### PESS IMPLANT

Fragments of the PESS implant are introduced into the orbital fat to restore volume and to improve cosmetic appearance in Post Enucleation Socket Syndrome. The PESS implant's pore structure allows colonization by fibrovascular tissues.

Developed by J.P. Adenis, M.D.

- Made of Hydroxyapatite (HA) 75% - Tricalcium Phosphate (TCP) 25%
- Porosity range: 250 - 550µm
- Sterile

	Single use	MATERIAL	PACKAGING
S6.5300	Pess implant	HA, TCP	Box of 1

### SIZERS

Sizers are designed to accurately select the appropriate orbital implant diameter in case of enucleation / evisceration

#### Sizers Set

- 4 sizers: 14, 16, 18 and 20 mm
- Made of PolyOxyMethylene (POM)
- Sterile

	Single use	MATERIAL	PACKAGING
S6.3060	Sizers set	POM	Box of 4

## CONFORMERS

Perforated conformers from FCI maintain the conjunctival cul-de-sacs after enucleation or evisceration without hindering lid closure.

- Perforations allow for post-operative instillation of eye drops and drainage of secretions
- Available in 2 models: rigid or flexible
- Translucent
- Single use

### Rigid conformers

- Made of polyamide 12
- Available in 3 sizes
- Sterile

	Single use	DIAMETER	PACKAGING
